# Mohit Kumar

Software Engineer III — Frontend, Web Platforms & AI Applications

mohitme100@gmail.com | linkedin.com/in/mohitarty | mohitarty.github.io

## Professional Summary

Software Engineer III with 7+ years of experience designing, building, and troubleshooting production web applications and reusable platform solutions. Deep expertise in JavaScript/TypeScript, React, frontend architecture, browser APIs, authentication, and performance optimization. Experienced in translating complex customer and business requirements into scalable implementations, collaborating across engineering and product teams, and owning solutions from discovery through launch, maintenance, and issue resolution. Builder of publicly released browser products, including an npm SDK, a privacy-first notebook, and a Chrome Web Store extension powered by Google's Summarizer API.

## Technical Skills

**Languages & Web:** JavaScript, TypeScript, HTML5, CSS3, HTTP, REST APIs, WebSockets
**Frameworks & State:** React, Redux, Angular, Vue, Nuxt, NgRx, RxJS, Node.js
**Architecture & Quality:** Frontend architecture, reusable components, design systems, API contracts, performance optimization, automated testing, Playwright
**Identity & Integrations:** OAuth/OIDC, Auth0, token exchange, Microsoft Teams, iframe-based applications
**Cloud & Delivery:** AWS S3, CloudFront, GitHub Actions, npm, Vite, Webpack
**Browser & AI:** Chrome Extensions, Canvas/SVG, OpenXML/PPTX, WebGPU, ONNX Runtime Web, local speech-to-text, lightweight LLM inference

## Professional Experience

**Forrester Research** **Oct 2022 – Present**
*Software Engineer III* *India*

- Own frontend architecture and delivery for production generative-AI experiences built with React and TypeScript, partnering with product, design, backend, QA, platform, and security teams.
- Design reusable components, shared patterns, and API contracts that improve consistency and accelerate feature delivery across multiple teams and application surfaces.
- Lead technical decisions involving state management, application performance, authentication, secure token handling, and Microsoft Teams integrations.
- Troubleshoot complex production issues across OAuth/Auth0 flows, WebSockets, reverse proxies, iframe constraints, and distributed services, driving investigations through resolution.
- Review code, guide implementation approaches, and improve reliability through targeted refactoring, test automation, and production-focused engineering practices.

**Copper Mobile** **Aug 2021 – Oct 2022**
*Senior Software Developer* *Gurugram, India*

- Led development of customer-facing web applications using Angular and JavaScript, converting complex business requirements and design specifications into maintainable frontend solutions.
- Worked with stakeholders and cross-functional teams to scope technical approaches, identify implementation risks, and support scalable long-term delivery.

**Jamboree Education** **Aug 2020 – Jul 2021**
*Software Developer* *New Delhi, India*

- Modernized legacy frontend codebases and development practices, improving maintainability, delivery predictability, and collaboration with product managers.
- Helped define realistic milestones and technical scope for product enhancements and platform improvements.

**Blemacion Technologies** **Jan 2019 – Jul 2020**
*Web Developer* *New Delhi, India*

- Built responsive and interactive web features with JavaScript and AJAX, with emphasis on usability, browser compatibility, and client-side performance.

## Projects

**Slideframe — Browser-Native PPTX Viewer SDK** *npm: @takemynotes/slideframe*

- Designed and published a TypeScript SDK that parses PPTX/OpenXML packages and renders presentations directly in the browser, with a reusable core and React integration.
- Built the ZIP, relationship, parsing, and rendering pipeline for slides, text, shapes, images, and presentation metadata.
- Established the public package workflow, documentation site, automated checks, and AWS S3/CloudFront deployment process.

**TakeMyNotes — Privacy-First Digital Notebook** *takemynotes.app*

- Built and shipped a local-first, canvas-based notebook supporting handwriting, typed text, shapes, multi-page documents, PDF export, printing, and backup/restore.
- Designed a compact versioned storage format with validation, stable object identities, change tracking, and preparation for future synchronization.
- Developed browser-based AI experiments for speech-to-text and transcript formatting using WebGPU, ONNX Runtime Web, and lightweight local models while keeping user data on-device.

**Fast Read — AI Webpage Summarizer** *Chrome Web Store*

- Built and published a Chrome extension that summarizes webpages using Google's Summarizer API.
- Implemented citation-aware output, multiple summary formats, and one-click copying for faster consumption of long-form web content.
- Delivered the complete browser product lifecycle, including extension architecture, user interface, privacy-focused behavior, and Chrome Web Store publishing.

## Education

**Bachelor of Technology in Computer Science**
Guru Gobind Singh Indraprastha University, Delhi
